

HANSCRAFT[®]
european spa producer

PREMIUM SPAS CATALOGUE

EUROPEAN SPA PRODUCER

based in Prague near the airport,
Czech Republic

EXPERIENCE

15 years of expertise in importing,
selling, and servicing hot tubs

STRICT TESTING

each hot tub undergoes thorough
testing in real conditions before
dispatch

THE BEST QUALITY HOT TUBS PARTS

we prioritize components sourced
from reputable US and European
suppliers

THE THICKEST SHELLS ON THE MARKET

our hot tubs feature premium 7 mm
double layer acrylic from the USA,
enhanced with an above standard
layer of polyurethane GreenShield

CERTIFICATIONS

our hot tubs proudly bear the TÜV
RHEILAND sticker, indicating their
adherence to strict performance
and quality standards.

SQR SYSTEM

we are using an innovative and
reliable method called SQR system
to install 98% of parts to the shell

MOST MODERN PRODUCTION IN CENTRAL EUROPE

ranked among the top 3 most modern
hot tub productions in Central Europe,
boasting cutting-edge equipment and
technologies

OUR UNIQUE OKA DESIGN

product line OKA design was created
in cooperation with leading Czech
designer and architect
Ing. Arch. MgA. Ondřej Kamenický

ENVIRONMENTALLY FRIENDLY PRODUCTION

we take pride in operating as a 97%
non-waste company, committed to
environmentally sustainable practices

Exceptional quality

Manufactured in Europe

Our hot tubs made in Europe in a next-generation factory using robotic production technology with extreme precision are subject to systematic testing.

To achieve the highest level of warranty, we use the best components in all production stages.

100% recyclable materials

The basis for ecological safety of our hot tubs is 100% recyclable Italian material GreenShield, which completely eliminates any risk associated with the use of outdated fibreglassing technology and the chemical substance styrene.

Professional team

Through collaboration with Martin Procházka, a renowned physiotherapist for top Czech athletes, our hot tubs guarantee a comfortable and maximally effective massage experience. Additionally, Ing. Arch. MgA. Ondřej Kamenický infuses a modern and attractive aesthetic into our designs.

TÜV standard

Thanks to our modern production and best quality components, all our products have received the TÜV Rheinland certification. This independent certification provides an international guarantee of quality.

Certified by an independent laboratory approved by TÜV in terms of 20 control criteria, some of which are:

- Resistance to high temperatures, temperature fluctuations and chemicals
- Material resistance, structural stability, resistance to pressure
- Optimized design eliminating the risk of leakage
- Meets electrical safety standards

Only 5% of hot tubs on the market are TÜV certified!

Inspired by the aerospace and automotive industries

Our robotic production line, inspired by the precision of the aerospace and automotive industries, enables us to achieve accuracy down to the millimeter, ensuring every detail is meticulously crafted to perfection.

Warranties

Thanks to the use of the highest quality of material in all stages of production, we can offer the best warranties on the market and a perfect delivery time.

The modern design of the hot tubs allows easy accessibility in case of the need for technical interventions.

Carefully selected materials

Hanscraft hot tubs feature top-quality acrylic shells, renowned for their exceptional durability and reliability. Our exclusive ABS-PMMA acrylic sheet, patented for its unique blend of acrylate resilience and ABS strength, is further reinforced with two layers of high-density Greenshield insulation.

Rigorously tested, our hot tubs guarantee long-lasting performance and reliability. Experience true quality with Hanscraft.

The best materials for hot tub paneling

Safeguarding Hanscraft hot tubs is our priority, reflected in our outer panels designed through patented processes. These panels are engineered to endure harsh weather conditions, UV radiation, high temperatures, scratches, shocks, and solvents. Crafted from high quality construction materials also utilized for example in terraces and facades, our outer panels ensure easy maintenance and long lasting durability.

Time-Tested Wooden Structure

The wooden structure treated with products according to class 4 is highly resistant to water, temperature fluctuations and the harshest climatic conditions. The flexibility of the wood reduces noise caused by vibrations and ensures reliable stability.

Latest Technology

The latest technologies developed by Balboa are used to control all the functions that the hot tub offers. A true leader in the spa industry, Balboa Water Group has been designing hot tub equipment for over 30 years.

Technology at your service

Multi-level insulation for significant energy savings

Indulge in tranquil hydrotherapy with Hanscraft hot tubs, meticulously designed for energy efficiency.

Our spas are crafted with innovative technologies focused on minimizing energy consumption, ensuring a serene experience every time.

From the robust shell to the paneling, thermocover, and other technical elements, our insulation solutions are unparalleled. Benefit from proven technical advancements that save up to several kilowatts per year, allowing you to enjoy luxurious relaxation while conserving energy effortlessly.

Ultimate Energy Efficiency

Finest Hot Tub Shells

Double GreenShield layer insulation is much more effective and durable than expensive foam insulation, and it also allows for better resistance of the tub.

10 mm

Cabinet Paneling

All Cabinet panels and the ABS Bottom are coated with 10 mm Thermoshield PVC Foam: Superior Insulation for Every Element of the hot tub.

Thermocover

The thermocover of Hanscraft hot tubs designed from the highest quality materials allows you to maintain an ideal water temperature.

ABS base

The thermoformed ABS base provides an impermeable barrier against heat loss and rising moisture coming from the ground.

3 independent pumps

To ensure quieter operation and more efficient energy management, we've opted to separate the massage and circulation pumps in our hot tubs.

Each pump activates alongside specific jet selections, maintaining consistent massage intensity whether you're enjoying the tub alone or with others.

The circulation pump handles filtration and heating duties, enabling all pumps and the heater to function simultaneously. This innovative approach not only minimizes noise levels during inactive periods but also contributes to reduced electricity consumption.

Massage pump

For premium OKA and HC design hot tubs, we always use 2 single-speed 2.2 kW pumps (with exception in hot tubs OKA1, OKA2 and HC8, which have only 1 single-speed pump) and one 200–400 W filtration pump. The reason for this is to guarantee their longer service life and, last but not least, to ensure an optimal massage with a constant flow in all places.

Blower

Our hot tubs are equipped with a blower for even more intensive hydrotherapy. The preheated air is driven via air jets. This makes the massage even more comfortable as it reduces the feeling of cold in the case of low outdoor temperatures. The preheated air also prevents the water temperature from dropping during the massage.

Circulation pump

There are several advantages to installing separate circulation pump:

- Significant reduction in hot tub noise in standby mode
- Less energy consumption than hot tubs that uses a dual speed pump for water circulation
- Allows further extension of the service life of massage pumps

Comfort for health

Experience the Restorative Power of Hydrotherapy

Hydrotherapy offers a wealth of benefits for both body and soul, delivering relaxation and healing effects. It alleviates muscle tension and joint pain, facilitates body regeneration and blood circulation, and aids in toxin elimination. Hydrotherapy also reduces stress and enhances sleep quality, promoting overall well-being.

Our hot tubs feature strategically arranged jets designed to target specific areas of the body, ensuring a tailored hydrotherapy experience. Additionally, select models boast tasteful and soothing waterfalls, creating an ambiance of relaxation and tranquility.

Venturi effect

Harnessing the power of the Venturi effect, our hot tubs offer personalized massage experiences. Through the adjustment valve, you have the flexibility to fine tune the air-to-water ratio of the massage jets. This ingenious design empowers you to seamlessly switch between intense and gentle massages, ensuring a tailored hydrotherapy session every time.

Hydromassage jets

Indulge in a diverse range of massages with CMP jets in Hanscraft hot tubs. Boasting four types of stainless steel accent jets available in three different sizes, each jet is enhanced with an adjustable Venturi effect and infused with additional air for an invigorating hydromassage experience. Carefully arranged, these jets precisely target specific areas of the body for optimal relaxation.

■ Unidirectional movable jet designed to target specific areas of your body with precision

■ A simple rotating jet that draws small circles and moves towards a specific part of the body

■ Bi-rotational jet for an intensive massage of a large part of the body

■ Unidirectional rotating jet that sprays a pulsating stream of water for an intensified massage

Respecting body ergonomics

Our meticulous attention to detail ensures that every seat in our hot tubs adheres to European standards. Each seat is carefully crafted to mimic the contours of your body, providing unparalleled comfort during your hydrotherapy experience. From relaxation to massage, our hot tubs are designed with your comfort in mind.

An experience for all the senses

Relaxing atmosphere

For those who love peace and relaxation, our hot tubs are equipped with a backlit waterfall. Let yourself be quietly carried away by the sound of running water and forget the concept of time.

Atmosphere full of colors

Experience the transformative power of chromotherapy with our LED lighting system. By projecting colored lights onto your skin, chromotherapy promotes holistic wellness, supporting both physical and mental health. From alleviating fatigue, depression, and anxiety to complementing the benefits of hydrotherapy, this natural method fosters harmony and balance within the body and mind. Discover the rejuvenating effects of chromotherapy as you embark on your wellness journey with us.

Telescopic skimmer for crystal clear water

They say the best accessories are the ones we don't notice. With telescopic skimmer technology, perfect water care is effortless, regardless of the number of people in the hot tub. Unlike fixed skimmers that clog when water levels rise, telescopic skimmers reliably collect surface dirt and foam. Enjoy pristine water conditions without the hassle, courtesy of our innovative telescopic skimmer technology.

Audio Bluetooth

Subwoofer

Complete audio system

Our HANSCRAFT OKA design hot tubs redefine luxury with an integrated high-quality audio system, ensuring moments of complete relaxation. Controlled effortlessly with your smartphone or tablet via Bluetooth, the system comes equipped with a subwoofer for an immersive experience. Immerse yourself in your favorite music while enjoying the ultimate hot tub experience. Upgrade to the HC design hot tubs to enjoy this premium audio system for an additional charge.

Quality Water Disinfection

Your satisfaction hinges on the quality of water in your hot tub, and at HANSCRAFT, we prioritize its safety. Given the elevated water temperature in hot tubs, which can facilitate bacteria growth, effective maintenance is crucial. That's why we've equipped our hot tubs with a completely natural water disinfection system that prioritizes your skin's well-being. This innovative approach also reduces the need for excessive chemical use, ensuring a safer and more enjoyable hot tub experience for you and your loved ones.

Quality water for health

Equipment for **100% natural** water treatment

UV lamp

Disinfects water using type C Ultraviolet Rays (UV).

- Allows clean and clear water
- 100% natural
- Destroys microorganisms, bacteria, algae
- Reduces the amount of chemicals needed

WARRANTY
FOR THE SHELL
AND CONSTRUCTION

10
YEARS

The DIAMOND hot tub from the OKANDINAVIA line elevates the wellness experience to heavenly heights. It is a masterpiece by the court architect and designer of HANSCRAFT, Ing. Arch. MgA. Ondřej Kamenický, and will be appreciated especially by discerning clients. It has roots in timeless Scandinavian luxury and design. The novelty is the so-called "hybrid position," where one lounge can be used not only for lying down but also for sitting.

Balboa TP700

Backlit control panel

Waterfall lighting

It creates a relaxing atmosphere combined with rustling water

Cervical spine jets

These directional jets are located outside the water circulation and are pointed at the level of the cervical spine

COMFORT

Control panel	Balboa® TP700
Hydromassage jets	49× Stainless steel CMP®
Air jets	6× Stainless steel CMP®
Cervical spine massage	Yes
Air control	Venturi effect: air/water flow control
Water treatment	UV lamp
Equipment	<ul style="list-style-type: none"> – LED lighting: jets, waterfall, above-waterline spotlights, bottom lighting – Waterfall – Anatomical headrest

TECHNICAL DATA

Pumps (3×)	<ul style="list-style-type: none"> – 2 mono speed massage pumps 2.2 kW – 1 circulation pump 200–400 W
Blower	Yes (with preheated air)
Heating	Balboa® 3 kW
Filtration	Telescopic skimmer CMP® cartridge filter
Shell	Acrylic layer ABS-PMMA Lucite® + double GreenShield layer insulation (PU)
Side panels	HDP panels Nomawood® / Hight Preassure Laminate panels Fundermax® (optional)
Water volume	1 100 l
Hot tub weight	287 kg

First choice accessories

More about

The thermocover

This is necessary to maintain the water temperature. It prevents heat loss to the maximum extent, but it also fulfills a safety function when children are near the hot tub. Our spas feature WeatherShield material, surpassing standard PVC covers in durability and performance.

Galvanized aluminium reinforcements to ensure perfect reinforcement

The inner mesh layer of the thermocover reduces water condensation and mold

High-quality layer against UV radiation and mold

High-density insulation made of polystyrene with a thickness of 9–13 cm

13 cm high skirt for even greater tightness of insulation around the entire hot tub

Lockable securing straps

Impermeable film

Weathershield advantages:

- 3× Times Stronger than PVC
- Modern, more durable and lighter in weight
- Wide handles

More about

The thermocover lifter

Necessary equipment to facilitate work. The lifter allows you to open and close the hot tub with a simple movement.

More about

The steps

Necessary for entering or exiting the HANSCHRAFT hot tub; it has 2 wide and stable steps made of high-density polyethylene (HDPE), which guarantees a long service life and water resistance.

Beyond-standard accessories

Extra insulation

If extra insulation is chosen, the wooden structure of the hot tub is filled by 40 mm thick thermoshield PVC foam. This ensures protection of technical components and hoses against extreme cold. This equipment is mainly offered in Scandinavian countries, but it also saves money on power consumption.

WiFi interface

Make your life easier with the possibility of operating the hot tub's control panel via a Wi-Fi interface. Change the temperature or check the correct operation of the hot tub: all this can be done in the blink of an eye on your smartphone even from the other side of the world.

Supplementary Heater

The supplementary heater rapidly brings the water to the specified temperature and sustains it, regardless of extremely cold and windy weather.

Microsilks technology

This is a device that produces billions of fine bubbles rich in oxygen that hydrate and regenerate the skin in depth by removing impurities, smoothing it out and neutralizing free radicals. This cosmetic procedure provides relief for people suffering from skin diseases such as eczema and psoriasis.

HPL Cabinets for HC Spas

Elevate your HC Models with our exclusive HPL Cabinet upgrade – the ultimate fusion of style and durability. Explore a wide range of color options and enjoy superior resilience. With 2 corner colors and 7 panel options to choose from, your spa will transition from traditional to contemporary effortlessly.

Bypass

This variant allows independent filtration or heating of the hot tub, e.g. using a sand filtration or a heat pump for swimming pools, thus reducing electricity consumption.

Preparation for embedding the hot tub

Do you want to embed your hot tub in a designated area? We offer you the option of ordering a hot tub without external paneling.

Cabinet LED light strip

Discover the magic of LED lighting and create the perfect atmosphere. Several LED light strips placed under the side panels of the hot tub will create the right atmosphere for relaxation.

Control panel Spa Touch 3

This is standard equipment of the OKA design hot tubs, however, but this Spa Touch 3 touch control panel can be installed on a range of HC design hot tubs on request.

Control panel Spa Touch 4

Featured in standard Equipment for OKANDINAVIA Diamond, also available as an extra for OKA and HC Series. This brand new panel offers superior functionality, interface and mainly has an inbuilt Wi-Fi Module.
